

**Tuesday, September 28, 2010 – 7pm – 9pm**

***Single Tooth Implants in the Esthetic Zone: Diagnosis and Execution!***

**Presented by: Dr. Anthony Sallustio**

**Sponsored by Kuwata Pan Dent**

The patient who presents with the hopeless or missing anterior tooth has the possibility to restore with state of the art technology: osseointegrated implants. Dr. Anthony Sallustio, a prosthodontist and member of St. Joseph's Medical Center's Craniofacial and Swallowing Center has extensive experience with all facets of restorative options, but dental implants have significantly taken precedence. In some cases, however, he has elected conventional techniques. Join us and learn why!

Through case review the participants will learn the essential diagnostic, anatomical and esthetic criteria for successful treatment of the anterior single tooth implant:

- Abutment considerations
- Clinical presentation
- Implant design
- Indicators for esthetic outcome
- Patient expectations
- Photography for consultation and communication
- Provisional restoration significance
  - step-by-step technique
  - materials of choice
- Shade selection techniques
  - conventional tabs
  - digital technology
  - limitations

Two continuing education credits are pending with the NJ State Board of Dentistry. Dinner will be served at 6:30pm. This course is for dentists only.

**HOW TO REGISTER**

To register for this FREE course, please send an email with your name, phone number and town of practice to [eelmore@njda.org](mailto:eelmore@njda.org), subject line "**Kuwata 2010 CE**". There is a maximum of 50 seats per course and registration is on a first-come first-served basis.
